

Calibration: a four-component annotation protocol yields a four-domain gold standard

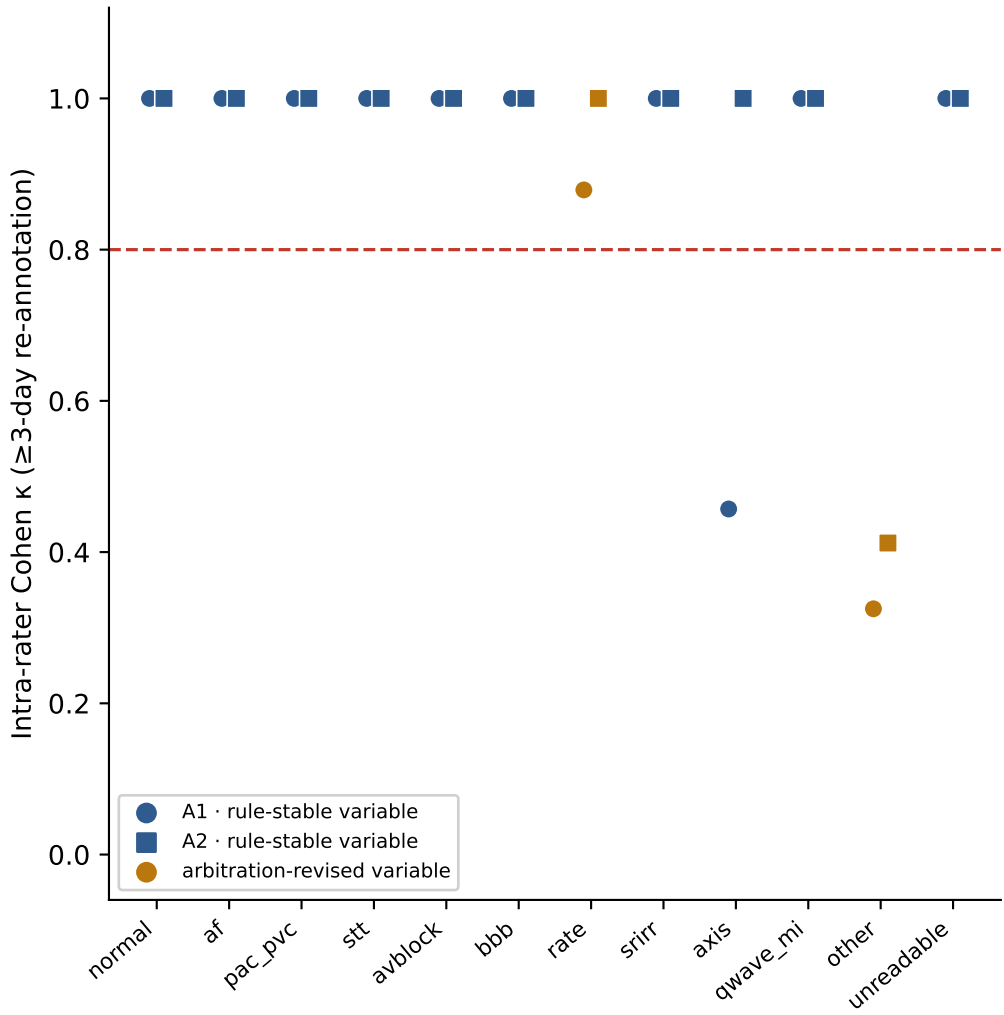

(a) Four domains · 1,470 records · 35 flag columns (28 variable definitions)

(b) 31/31 variables meet the  $\kappa \geq 0.80$  gate (grouped by domain)

(c) Test-retest stability (ECG\_H: 57 records  $\times$  12 variables  $\times$  2 annotators)

(d) Every disagreement became a durable codebook rule
